

SENSIBLE INFORMATION INQUIRY SYSTEM AND METHOD FOR MOBILE PHONES

ABSTRACT OF THE INVENTION

5 A system and method for information inquiry to phone books or databases of
mobile phones is disclosed. In one embodiment, the disclosed system integrates
person names and company titles into keywords to find properly allocations in
databases for storage purpose. An individual may inquire information by giving
keywords under input modes by means of English characters, mandarin phonetic
10 notations, or pinyin syllables for searching. A telephone number selected from the
searched database records can then be dialed based on individual's selections.
